

ACOUSTIC ELEMENTS

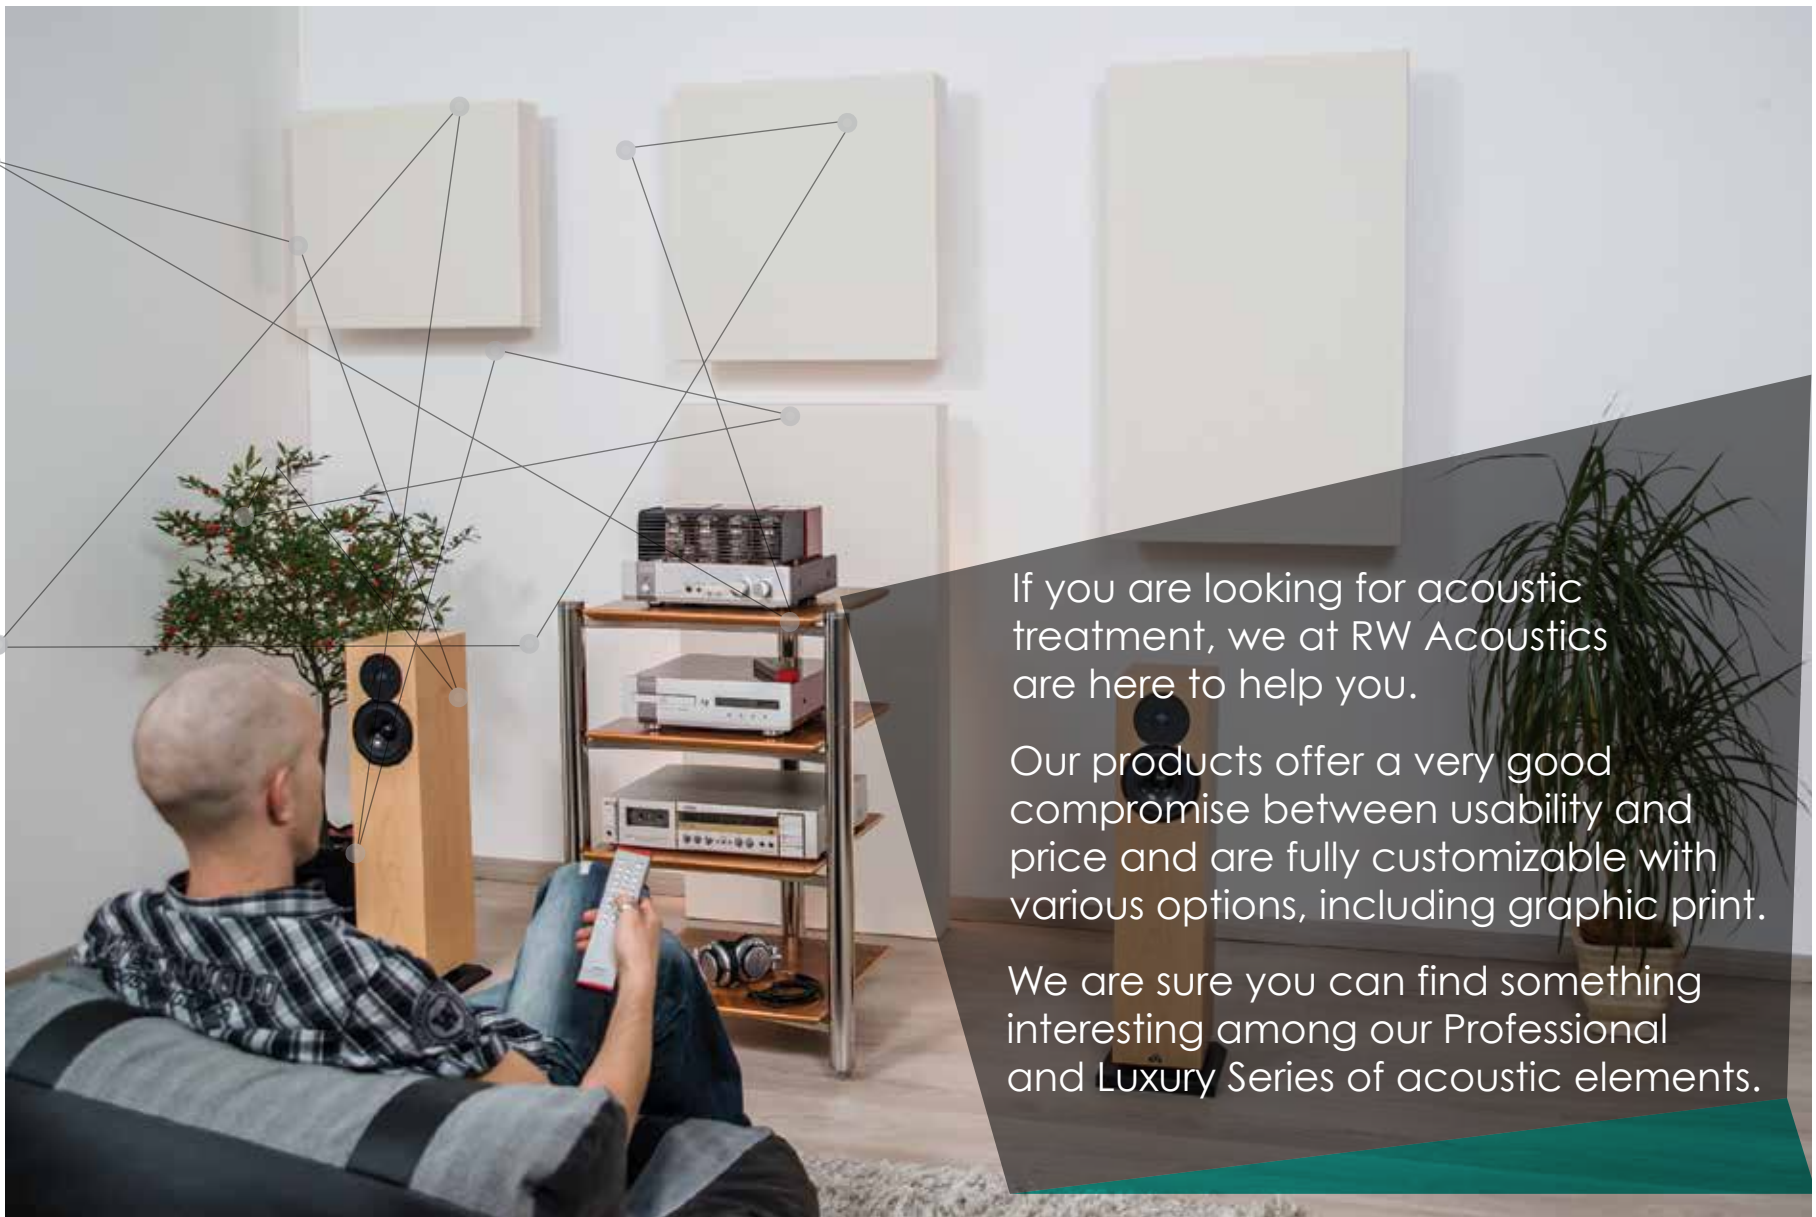

DESIGNED FOR AUDIOPHILES

ACOUSTICS™

With the development of acoustic science it has become clearer how acoustics impact our everyday life. Sound reverberation has been detected as a major problem in rooms, especially with modern architecture and its minimalist design.

These unwanted sound effects can be easily eliminated with the use of acoustic treatment products. Our products help decrease sound reverberation to the best level, allowing you to enjoy and utilize your Hi-Fi system to its limits.

If you are looking for acoustic treatment, we at RW Acoustics are here to help you.

Our products offer a very good compromise between usability and price and are fully customizable with various options, including graphic print.

We are sure you can find something interesting among our Professional and Luxury Series of acoustic elements.

Professional Series

Professional Series is a series of acoustic panels suitable for advanced users.

The depth of the panels is 10 cm (3.9 inches), which assures great sound absorption, especially at mid and high frequencies.

Additionally, you are able to select spacers and add side perforation to even further improve their efficiency.

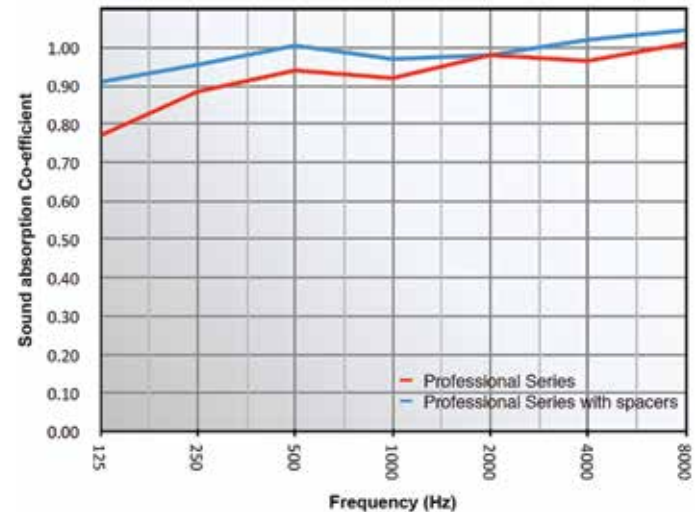

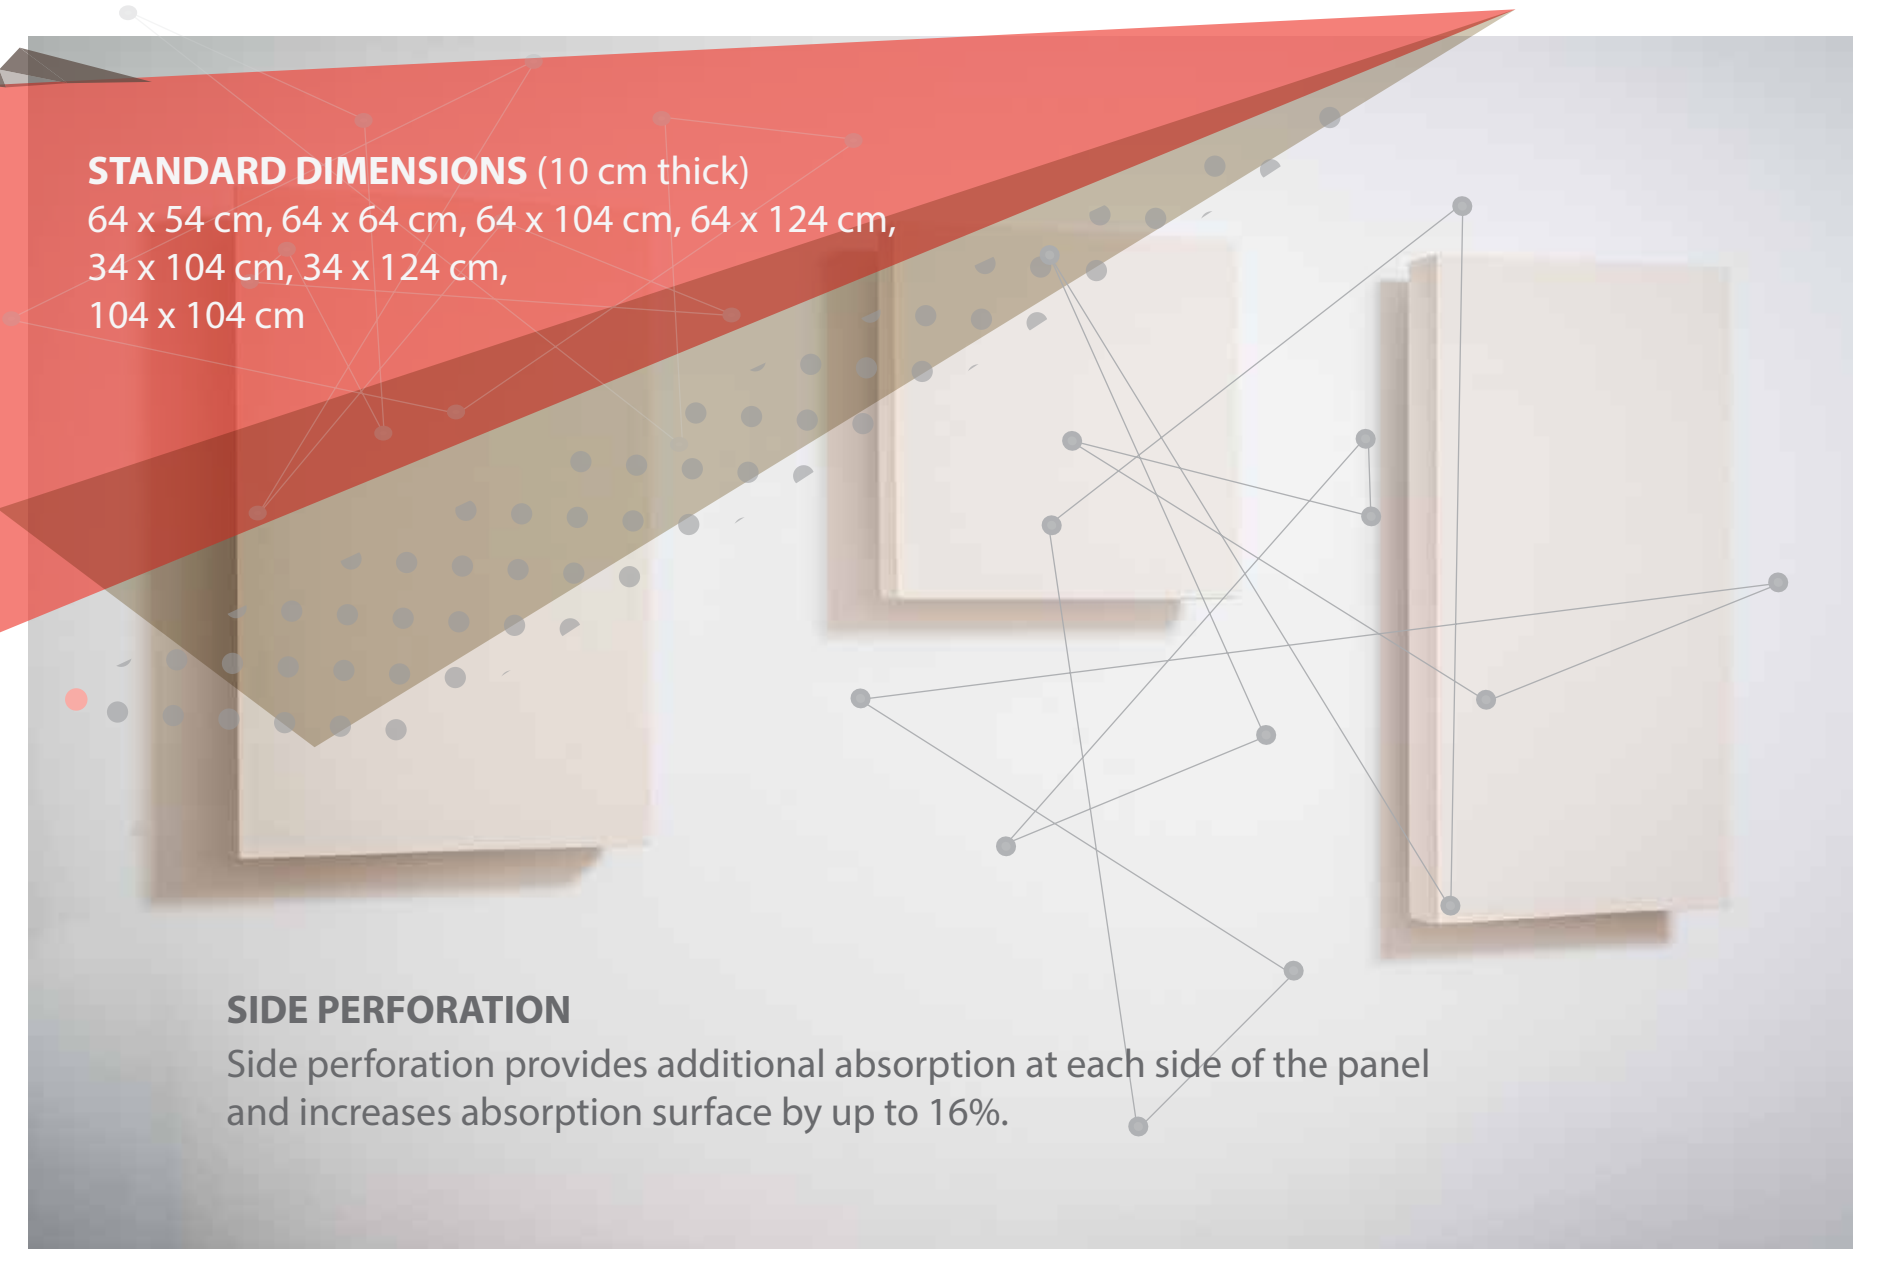

Acoustic elements from the Professional Series offer high absorption in the whole frequency range from 125Hz upwards.

The panels are suitable for use in all types of rooms and desirable where music is played, produced and performed. By mounting them with spacers, you can achieve up to 18% more absorption in the lower part of the frequency spectrum.

Measurements were made in accordance with EN ISO 354:2003 standard.

The image features a large, semi-transparent red and brown geometric shape in the upper left corner, which serves as a background for the 'STANDARD DIMENSIONS' text. Below this, three acoustic panels are shown: a square panel on the left, a rectangular panel in the center, and a tall rectangular panel on the right. The square panel has a grid of small grey dots representing perforations. The other two panels have a network of grey dots connected by thin lines, representing the 'side perforation' concept. The overall background is a light grey gradient.

STANDARD DIMENSIONS (10 cm thick)

64 x 54 cm, 64 x 64 cm, 64 x 104 cm, 64 x 124 cm,
34 x 104 cm, 34 x 124 cm,
104 x 104 cm

SIDE PERFORATION

Side perforation provides additional absorption at each side of the panel and increases absorption surface by up to 16%.

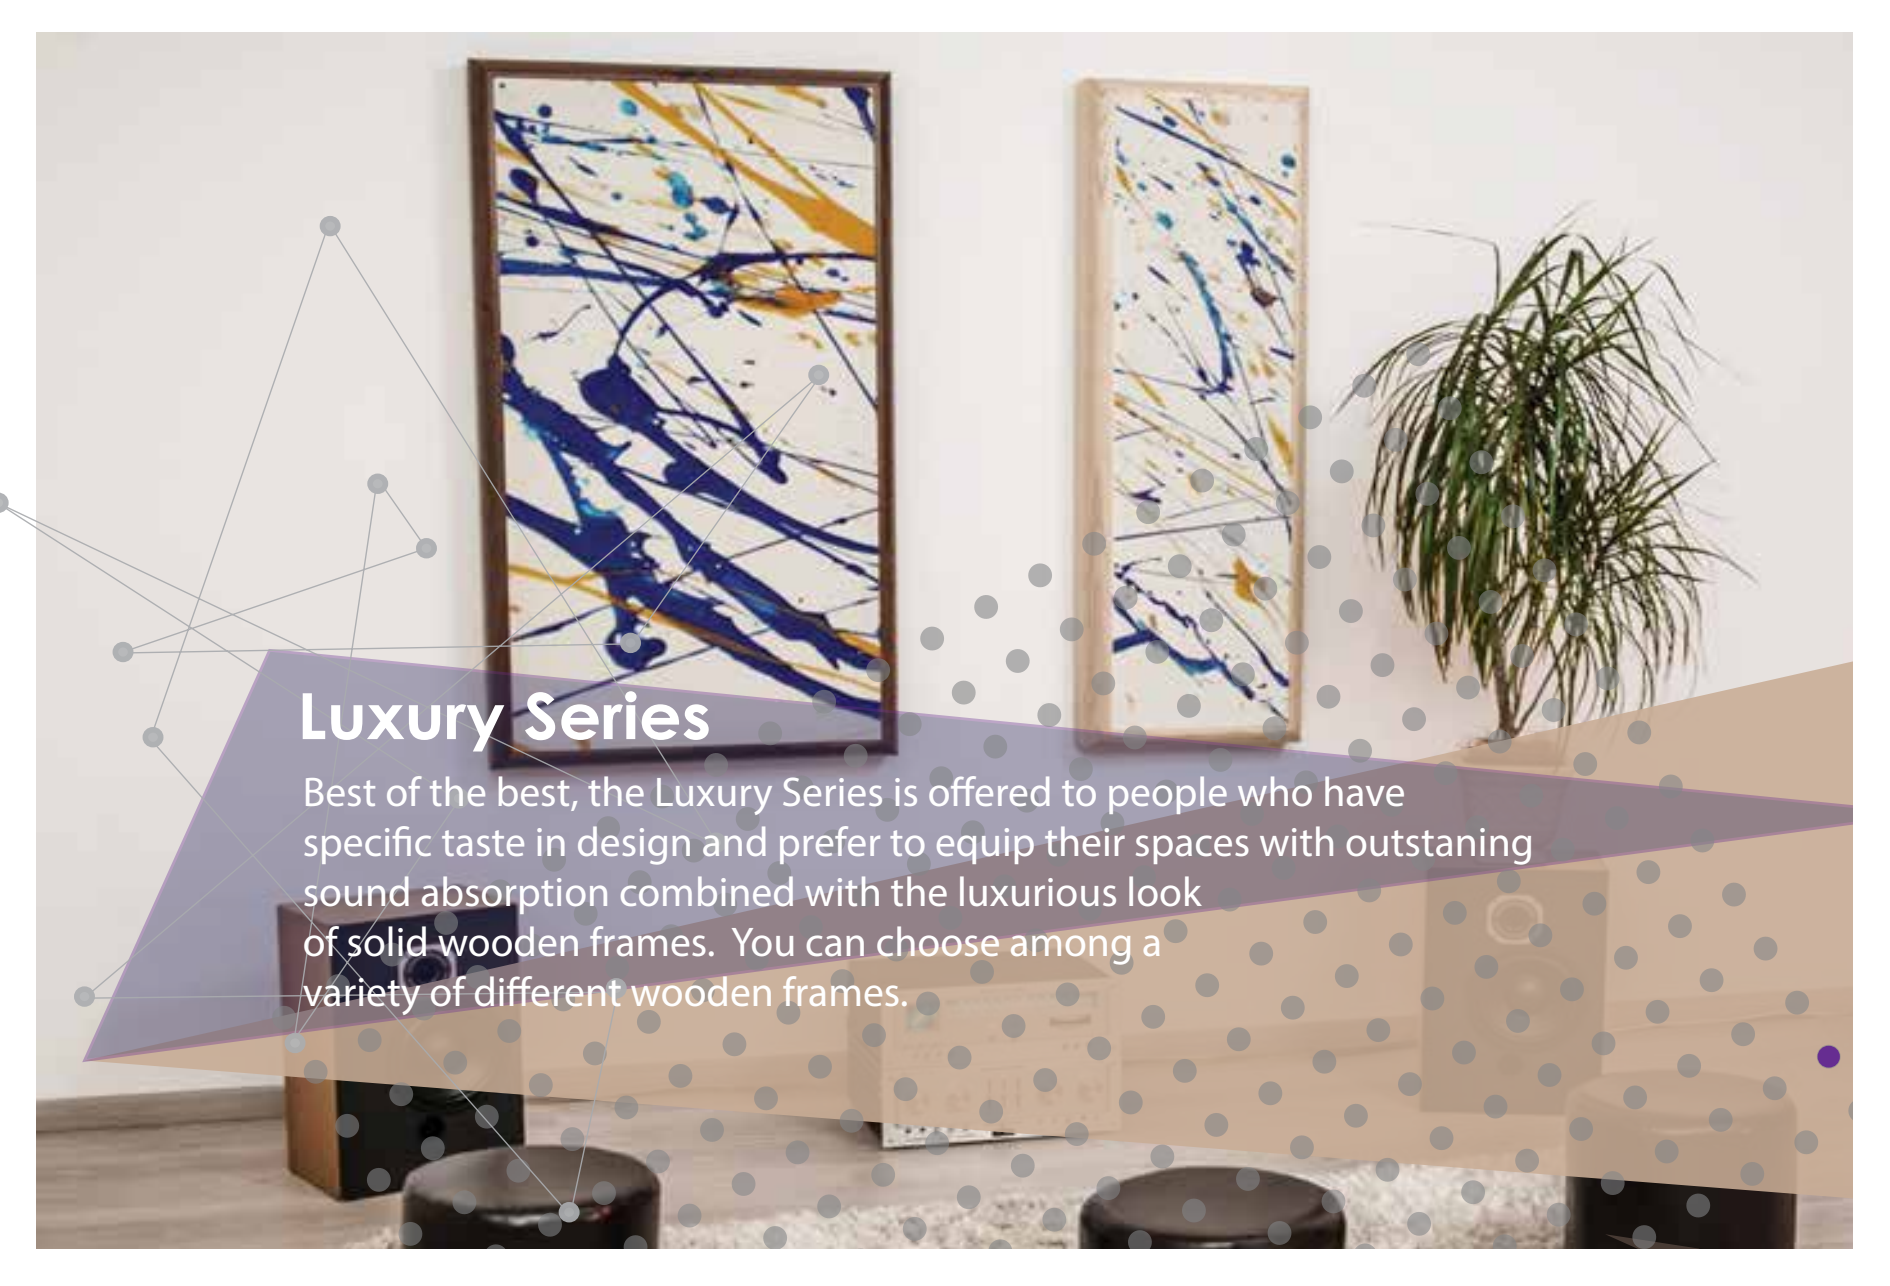

LED BACKLIGHT

With LED backlight, you can achieve subtle room lightning for a joyful listening experience.

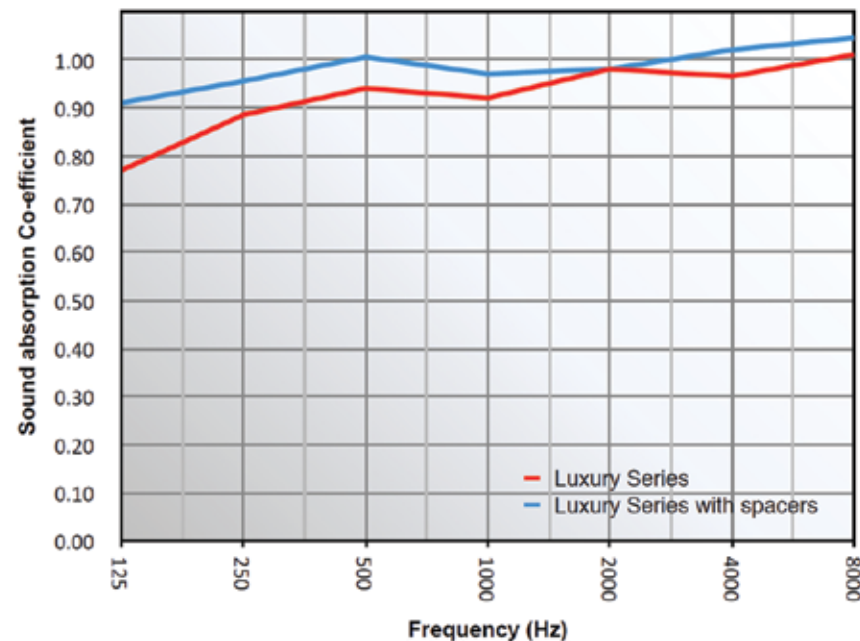

SPACERS

Mounting acoustic panels with spacers is proven to increase sound absorption efficiency by up to 18%. We advise you to use spacers in listening rooms, studios and any other areas which are big enough to accomodate such an arrangement.

Luxury Series

Best of the best, the Luxury Series is offered to people who have specific taste in design and prefer to equip their spaces with outstanding sound absorption combined with the luxurious look of solid wooden frames. You can choose among a variety of different wooden frames.

Acoustic elements from the Luxury Series offer high absorption in the whole frequency range from 125Hz upwards.

They are suitable for use in all types of rooms and desirable where music is played, produced and performed. By mounting them with spacers, you can achieve up to 18% more absorption in the lower part of the frequency spectrum.

Measurements were made in accordance with EN ISO 354:2003 standard.

STANDARD DIMENSIONS (10 cm thick)

72 x 72 cm, 72 x 112 cm, 72 x 132 cm,
42 x 112 cm, 42 x 132 cm,
112 x 112 cm

SPACERS AND LED BACKLIGHT

Just as the panels from Professional Series, the Luxury Series can also be enhanced with spacers and LED backlight. Mounting acoustic panels with spacers is proven to increase sound absorption efficiency by up to 18%, while LED backlight provides the best room lighting conditions for a full music experience.

WOOD TYPES

Currently available wooden frames for panels from Luxury Series include Ash, Walnut, American Walnut, American Cherry, Oak, Iroko, Mahogany and Teak.

CUSTOM DIMENSIONS

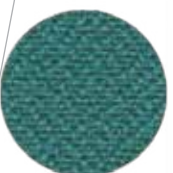

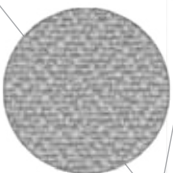

If you can't find what you're looking for in our standard dimensions and need specifically sized or shaped acoustic panels, we will be glad to help you with our custom design services.

CUSTOM PRINT

Any computer graphic or photo can be printed on the acoustic panel to additionally personalize it.

FABRIC & COLORS

Our acoustic panels are made out of low density acoustic fabric, which allows sound to pass through to the absorbing material. The fabric is available in multiple colors, ordering of custom color tones is also possible.

THE BRAND

The RW Acoustics™ brand was created in 2013, after long years of research in the area of room acoustic treatments. During this time, we cooperated with the best experts in acoustics and managed to develop high quality and highly absorptive acoustic elements, with an addition of stylish design and a great number of additional options.
